PROJECT DESIGN PHASE-II

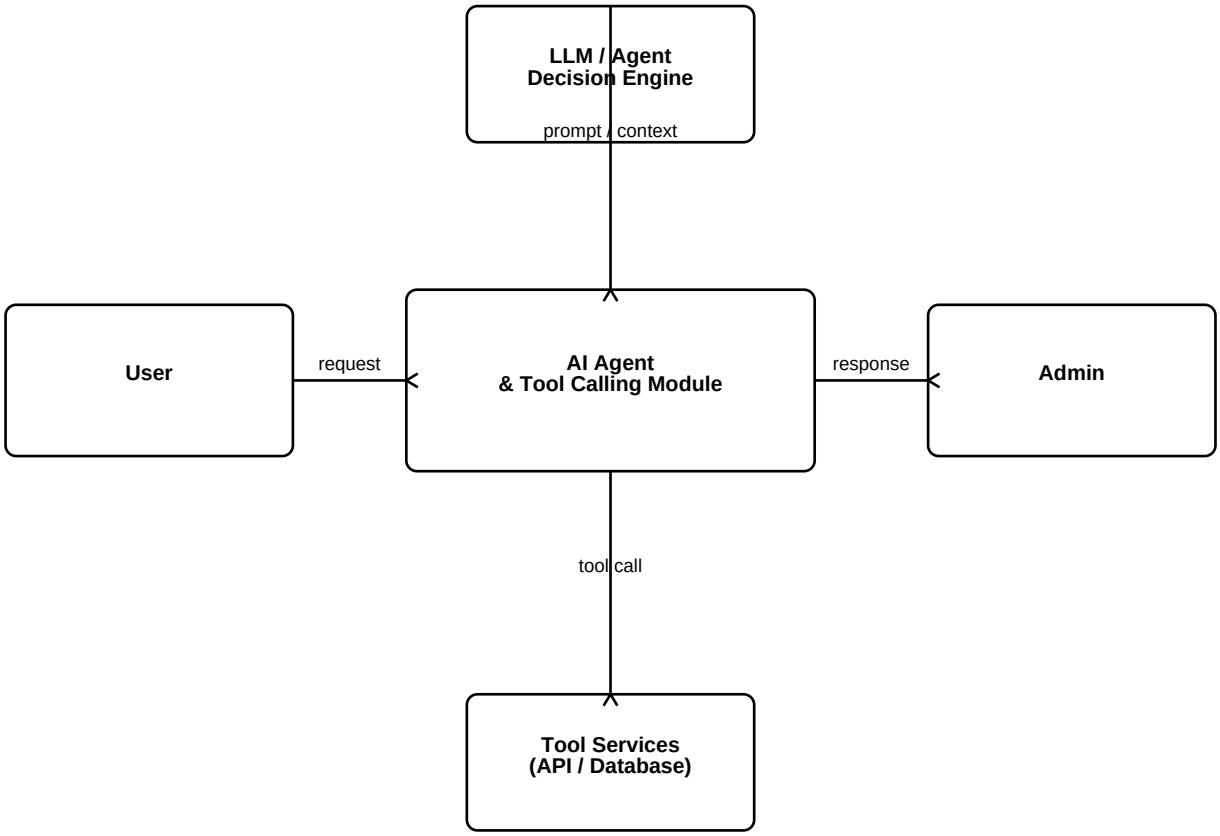
Data Flow Diagram & User Stories

Date	27 September 2026
Team ID	Not provided
Project Name	AI Agent & Tool Calling Module
Maximum Marks	4 Marks

Data Flow Diagrams

A Data Flow Diagram (DFD) shows how information moves through the AI Agent & Tool Calling Module. The user sends a request, the AI agent processes the prompt and context, decides whether a tool is required, calls the required API/database service, and returns the result to the user.

DFD Level 0 — AI Agent & Tool Calling Module



Main data flows: User request → AI Agent → LLM/Decision Engine → Tool/API or Database → AI Agent → User response.

User Stories

The following user stories are filled for the AI Agent & Tool Calling Module.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
User	Agent Request	USN-1	As a user, I can enter a question or task for the AI agent.	The agent accepts the request and generates a response.	High	Sprint-1
User	Agent Response	USN-2	As a user, I can receive a clear response from the AI agent.	A relevant response is displayed for the submitted request.	High	Sprint-1
User	Tool Calling	USN-3	As a user, I can ask the agent to perform a task that needs an external tool.	The agent identifies the required tool and calls it successfully.	High	Sprint-2
User	Tool Result	USN-4	As a user, I can receive the result returned by the selected tool.	The tool result is processed and shown to the user.	High	Sprint-2
User	Error Handling	USN-5	As a user, I can receive a useful message when a tool call fails.	The system handles the error and displays a safe error message.	Medium	Sprint-2
Developer	Tool Management	USN-6	As a developer, I can add and configure tools for the AI agent.	A tool can be registered with its name, purpose, inputs and outputs.	High	Sprint-3
Developer	Logging	USN-7	As a developer, I can view agent and tool-call logs.	Requests, tool calls and results are recorded for debugging.	Medium	Sprint-3
Administrator	Access Control	USN-8	As an administrator, I can control access to the agent and tools.	Only authorized users can access protected tools.	High	Sprint-3
Administrator	Monitoring	USN-9	As an administrator, I can monitor system usage and tool activity.	Usage and tool activity can be reviewed from logs/dashboard.	Medium	Sprint-4
System	Context Handling	USN-10	As the system, I can pass relevant context to the AI agent.	The agent uses the available context to produce an appropriate response.	High	Sprint-2
System	Tool Selection	USN-11	As the system, I can select the appropriate tool based on the user request.	The correct configured tool is selected when tool use is required.	High	Sprint-2
System	Security	USN-12	As the system, I can validate tool inputs before execution.	Invalid or unsafe inputs are rejected before the tool is executed.	High	Sprint-4

Project Notes — Simple English & Tamil

English: The AI Agent receives the user's request. It understands the request, decides whether a tool is needed, calls the required tool, gets the result, and gives the final answer.

Tamil: User request-■ AI Agent ■■■■■■■. Request-■ ■■■■■■■■■ ■■■■■■■ tool ■■■■■■■■■■■■■■■■ ■■■■■■ ■■■■■■■ ■■■■■■■■■. ■■■■■■■■ tool/API-■ call ■■■■■■■ result-■ ■■■■■■■. ■■■■■■ final response-■ user-■■■■■ ■■■■■■■■■■■.

Important fields left for you to update

• Team ID — ■■■■■■■ actual Team ID-■ ■■■■■■■■ ■■■■■■■■■■■■■.
• If your college requires a specific team/project name, replace the project name above with the official title.
