BRAINSTORM & IDEA PRIORITIZATION TEMPLATE

AI WEATHER WISE

Ideation Phase

Date	27 September 2026
Team ID	SWTID-2026-1491
Project Name	AI Weather Wise
Maximum Marks	4 Marks

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Team Members: Gunasree S, Hemavathi M, Nisha S, Saraswathi R.

Selected Problem Statement: Users often receive raw weather information such as temperature, humidity, wind speed and weather condition, but may find it difficult to understand what the information means for their daily activities. The team identified the need for a user-friendly application that converts current weather data into simple explanations and useful recommendations using Artificial Intelligence.

Problem Focus: Make weather information simple, understandable and useful for everyday decision-making.

Step-2: Brainstorm, Idea Listing and Grouping

No.	Brainstormed Idea	Group / Purpose
1	Current weather information by selected city	Core Weather
2	Temperature, humidity and wind-speed display	Core Weather
3	AI-generated simple weather summary	AI Feature
4	AI-based weather recommendations	AI Feature
5	Secure user registration and login	Authentication
6	Token-based authentication using Bearer Token/JWT	Security
7	REST API-based communication	Backend/API
8	7-day weather forecast	Future Enhancement
9	Automatic location detection	Future Enhancement
10	Weather alerts and push notifications	Future Enhancement
11	Weather history and multiple-city comparison	Future Enhancement
12	Weather maps and charts	Future Enhancement
13	Voice assistant for weather queries	Future Enhancement
14	Mobile application	Future Enhancement
15	Multi-language weather support	Future Enhancement

Step-3: Idea Prioritization

The ideas were prioritized based on relevance to the selected problem, usefulness to users, feasibility with the available technologies, and ability to deliver the core project objective.

Priority	Idea / Feature	Reason for Priority
1	AI Weather Summary	Directly converts raw weather data into easy-to-understand information.
2	AI Weather Recommendation	Provides useful guidance based on current weather conditions.
3	Location-based Weather Information	Provides the essential current weather data for a selected location.
4	Temperature, Humidity & Wind Details	Supplies the main weather parameters required for analysis.

Priority	Idea / Feature	Reason for Priority
5	User Registration & Login	Provides controlled access to the application.
6	REST API Communication	Connects the UI with backend, weather and AI services.
7	Token/JWT Authentication	Protects authenticated API requests.
8	7-Day Forecast	Useful enhancement for future versions.
9	Weather Alerts / Notifications	Can improve timely awareness of weather changes.
10	Location Detection / Maps / Voice / Mobile / Multi-language	Additional enhancements that can improve accessibility and usability.

Final Selected Idea: AI Weather Wise – an AI-powered weather application that retrieves current weather information and transforms it into simple summaries and useful recommendations.

Expected Outcome: A simple, user-friendly weather application that helps users understand current weather conditions and make suitable everyday decisions.

Source Basis: Prepared from the supplied AI Weather Wise project documentation and the supplied Brainstorm & Idea Prioritization Template. The project documentation identifies AI summaries and recommendations, location-based weather information, authentication and REST APIs as core features, with additional enhancements listed for future versions.
